

SASINDA PRABHATH

UNDERGRADUATE

Malabe, Sri Lanka | +94 70 291 3137 | sasindaprabhath94@gmail.com

LinkedIn | GitHub

PROFESSIONAL SUMMARY

3rd Year IT Undergraduate with strong programming expertise, full-stack development, and exposure to AI and Machine Learning technologies. Proficient in Java and Python for backend development, with solid front-end skills in React for building responsive user interfaces. Experienced in cloud platforms such as AWS and Azure, along with DevOps practices including CI/CD pipelines, Docker containerization, and basic Kubernetes deployments. Knowledgeable in the software development lifecycle, version control systems, and modern engineering practices. Possesses a strong foundation in object-oriented programming, data structures, and algorithms, with a passion for building scalable, intelligent, and maintainable software solutions in collaborative development environments.

EDUCATION

Sri Lanka Institute of Information Technology (SLIIT)

(2023-present)

BSc (Hons) in Information Technology Specializing Information Technology

Related Coursework: Cloud Computing, Database Management, Software Development

GPA: 3.10/4.00

PROJECTS

• AI-Powered Resume Analyzer

- Developed an AI-powered resume analysis system that intelligently matches candidates with job descriptions using NLP and semantic embeddings.
- Built a responsive frontend using React.js and TypeScript for real-time resume analysis and match scoring.
- Developed a high-performance backend using FastAPI (Python) to handle document processing, inference, and API services.
- Integrated Hugging Face Transformer models for semantic similarity, keyword extraction, and contextual job matching.
- Implemented secure authentication and authorization to protect user data and analysis results.
- Enabled real-time resume analysis with fast feedback and scoring insights.
- Deployed the application on AWS EC2, ensuring scalability and production readiness.
- Implemented CI/CD pipelines using Jenkins and Docker, automating build, test, and deployment workflows.
- Containerized services using Docker for consistency across development and production environments.
- Set up full-stack monitoring and observability using Prometheus and Grafana to track system performance and health.

Technologies: React.js, TypeScript, Python, FastAPI, Hugging Face Transformers, NLP, AWS EC2, Jenkins, Docker, Prometheus, Grafana

• Python - Flask Todo Application - Full DevOps Pipeline

- Designed and implemented an end-to-end CI/CD pipeline using GitHub Actions, Docker, Azure Container Registry (ACR), and Azure Kubernetes Service (AKS).
- Automated container build, test, and deployment workflows, ensuring faster and reliable application releases.
- Implemented GitOps practices using ArgoCD and Helm for declarative, version-controlled Kubernetes deployments.
- Managed Helm charts for application configuration, scalability, and environment consistency.
- Configured NGINX Ingress Controller for secure external access, routing, and load balancing.
- Set up monitoring and observability solutions to ensure application health and production readiness.
- Improved deployment consistency, rollback capability, and operational efficiency across environments.

Technologies: Python, Docker, Kubernetes, NGINX, ArgoCD, Helm, Git

• Vehicle Auction System (MERN)

- Designed and developed a full-stack online auction platform for classic and luxury vehicles using the MERN stack.
- Implemented secure JWT-based authentication and authorization for users and administrators.
- Built real-time bidding functionality using WebSockets, enabling instant bid updates without page refresh.
- Developed a responsive React frontend with intuitive UI/UX for browsing, filtering, and bidding on vehicles.
- Created a Node.js & Express.js RESTful backend to manage auctions, bids, users, and listings.
- Designed and optimized a MongoDB database schema for efficient data storage and fast query performance.
- Implemented advanced search and filter options (price, brand, model, year, auction status).
- Developed an admin dashboard for managing users, vehicle listings, and auction activities.
- Ensured secure API communication and data validation across the application.

Technologies: MongoDB, Express.js, React, Node.js, JWT, WebSocket

• Spendly Mobile App (Kotlin)

- Developed a comprehensive Android personal finance management application as part of the 2nd Year Mobile Development module.
- Implemented expense and income tracking to help users monitor daily financial activities.
- Designed monthly budget planning features with visual analytics (charts and summaries) for better financial insights.
- Integrated automated notification reminders to support financial goals and spending discipline.
- Implemented local data storage with backup and restore functionality to ensure data persistence and reliability.
- Designed an intuitive and user-friendly interface to enable efficient and seamless financial management.

Technologies: Kotlin, Android SDK, SQLite/Room Database, Notification API

CERTIFICATIONS

- AWS Certified Cloud Practitioner | AWS
- Kubernetes Introduction | Linux Academy
- Docker Training Course | KodeKloud
- CCNAV7: Introduction to Networks | Cisco Academy

SKILLS

Professional

- Programming Languages: Java, C, C++ , Python, Kotlin, TypeScript
- Frameworks and Libraries: MERN Stack, React.js, Node.js, FastAPI, Flask
- Cloud Platforms: Azure, AWS
- DevOps & Containerization: Docker, Kubernetes, Terraform, Jenkins
- Scripting: Bash / Shell Scripting
- Operating Systems: Linux, Windows
- Database: SQL, MongoDB, PostgreSQL
- Version Control: Git / GitHub

General

- SOFT SKILLS: Problem Solving, Critical Thinking, Great Team Player, Teamwork & Collaboration
- COMMUNICATION SKILLS: English (Working proficiency), Sinhala (Native proficiency)
